## **Legal Advantage Expands its Prior Art Search Offerings**

**Wednesday, March 19, 2008**

Bethesda, MD - Legal Advantage, a leading provider of patent and prior art search services, has expanded its search offerings to include Landscape Analysis, Patent Proofreading, Chemical Search, Patent Mapping, DNA and Chemical Sequencing Listing services.

Legal Advantage currently offers Novelty, Patentability, Pre-examination Search, State-of-the-Art, Collection Search, Freedom to Operate, Right to Use Search, Validity, Invalidity Search, Clearance Search, Infringement Search, Accelerated Examination Search, Opposition Search, and Patent Watch to over 250 of its law firm clients.

"While there is a tremendous and growing need among intellectual property and business professionals to access patent information, there have been limited ways for them to digest this information. Our patent landscape analysis services allow these patent prosecutors or business professionals to examine their portfolio and understand the opportunities that are out there," said Mirza Baig, CEO of Legal Advantage.

"We bring the same level of discipline to prior art as we do to other services. Legal Advantage fills the vacuum of scaled and quality service that has been lacking for these studies. Our intellectual property clients can now focus on innovating and protecting their intellectual property with a partner who understands their needs," Baig added.

DNA and chemical sequencing listing services were started after working with clients in New York and New Jersey. "We constantly work with biotechnology and pharmaceutical firms in assisting with their other search and illustration needs. This expansion in sequencing and listing services is a result of working with these companies over the course of five years," said Samba Rao, Vice President of Operations.

"As always, we are expanding in every form, and diversification of our Prior Art offerings is vital to our growing process," continued Rao. "This will position us to optimally serve our clients with much more flexibility while improving our patent and prior art deliverables."
